General Information

The master's program in Molecular Medicine at the FAU Erlangen-Nuremberg starts in the winter term. The usual period for completing the M.Sc. is two years (4 semesters), after which a Ph.D. program can be started. The master's program is based on the bachelor's program "Molekulare Medizin" at FAU and provides an advanced education with the goal of preparing students for a career in biomedical research. All courses of the master's program are given in English.

To enter the master's program, applicants must have completed a bachelor's degree with high academic standing from a recognized university.

Applicants apply online through the master application portal of the FAU:

<https://www.fau.eu/study/prospective-students/application-and-enrolment/applying-for-masters-degree-programmes/>

The master's program includes compulsory, elective compulsory and elective modules. The master's thesis is completed during the fourth semester. All modules add up to 120 ECTS credit points.

An external stay of up to six months duration – preferentially abroad - is suggested for all students.

Examination Regulations

Area 1 - Compulsory Modules

Curricular Category and Module Names	ECTS	Semester	
Area 1 - Compulsory Modules	35		Area grade
Advanced Lectures in Molecular Medicine 1	10	1.	Graded
Laboratory Animal Science and Biological Safety	5	1.	Pass/fail
Architecture of Biopolymers	5	1.	Graded
Advanced Lectures in Molecular Medicine 2	10	2.	Graded
Research Design	5	2.	Graded

The area grade is calculated as the average of the modules weighted by the modules' ECTS points. The area 1 grade contributes approx. 29% to the final master's grade (35/120 ECTS).

Advanced Lectures in Molecular Medicine 1

1	Module name	2430 - Advanced Lectures in Molecular Medicine 1	10 ECTS
2	Courses/lectures	- V: Immunology (2 SWS) - V: Molecular Neuroscience (2 SWS) - V: Molecular Imaging (2 SWS)	
3	Lecturers	Prof. Dr. C. Bogdan, Prof. Dr. D. Vöhringer, Prof. Dr. K. Prof. Dr. G. Kröncke, Prof. Dr. D. Dudziak,, Prof. Dr. C. Alzheimer, Prof. Dr. R. Enz, Prof. Dr. J. Winkler, Prof. Dr. D.C. Lie, Prof. Dr. T. Bäuerle and others	
4	Module coordinator	Prof. Dr. Enz Lecture coordinators: Prof. Bogdan (Immunology), Prof. Enz (Neuroscience), Prof. Lie (Imaging)	
5	Contents	<p>Lecture: Immunology <u>Mechanisms, models and concepts</u></p> <ul style="list-style-type: none"> • Evolution, components, function and dysfunction of the immune system • Anti-infectious immune response: innate, T and B cell-mediated immunity • Termination of the immune response, resolution of inflammation and tissue repair • Tumor immunology <p><u>Medical aspects</u></p> <ul style="list-style-type: none"> • Allergies, autoimmunity, chronic inflammatory and autoinflammatory diseases, immunodeficiencies, graft vs. host disease • Immunotherapy, antibodies and vaccination <p><u>Specific techniques and methods in immunology</u></p> <p>Lecture: Molecular Neuroscience <u>Mechanisms, models and concepts</u></p> <ul style="list-style-type: none"> • Neurocytology and synapses • Learning, memory, dementia and sleep • Sensory systems: Pain, Hearing, Vision • Plasticity in the central nervous system • Brain development <p><u>Medical aspects</u></p> <ul style="list-style-type: none"> • Neurodegenerative diseases and stroke • Psychiatric diseases <p><u>Specific techniques and methods in neuroscience</u></p> <p>Lecture: Molecular Imaging <u>Mechanisms, models and concepts</u> Principles of imaging and manipulation of cell-biological und molecular processes</p> <p><u>Medical aspects</u> Preclinical models for human diseases (CNS Diseases, Oncology)</p> <p><u>Specific techniques and methods in molecular imaging</u></p> <ul style="list-style-type: none"> • optical imaging 	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 1 - Compulsory Modules

		<ul style="list-style-type: none"> • transgenic reporters for optical imaging • Magnetic Resonance Imaging • SPECT und PET • optogenetics
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • obtain profound knowledge in the above described contents. • understand principle molecular and cellular mechanisms and their interplay in the nervous and immune systems. • understand basic and state-of-the-art concepts in imaging of biomedically relevant molecular and cell biological processes. • transfer obtained theoretical and methodological knowledge to research projects and to clinical settings including molecular therapies and diagnostics.
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine
8	Integration in curriculum	Compulsory module, 1st semester
9	Module compatibility	M. Sc. Molecular Medicine
10	Method of examination	Written exam, 180 min, open questions and multiple choice (24301)
11	Grading procedure	Grade of the written exam
12	Module frequency	Annually in the winter term
13	Resit examination	Twice
14	Workload	Class time: 90h Study time: 210 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	<p>Immunology Cellular and Molecular Immunology, eds. Abbas, Lichtman and Pillai, Elsevier-Saunders, newest edition; Janeway's Immunobiology, eds. Murphy, Travers and Walport, Garland Science, newest edition</p> <p>Neuroscience Principles in Neural Science, Ed. Kandel, Schwartz, Jessel, Mc Graw Hill</p>

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 1 - Compulsory Modules

		Basic Neurochemistry, Ed. Siegel, Albers, Brady, Price, Academic Press newest editions Imaging Weissleder et al., Molecular Imaging, People's Medical Publishing House, newest edition

Architecture of Biopolymers

1	Module name	2440 - Architecture of Biopolymers	5 ECTS
2	Courses/lectures	S: Architecture of Biopolymers (2 SWS) Mandatory Attendance T: Computer-based tutorial to Architecture of Biopolymers (2 SWS)	
3	Lecturers	Prof. Dr. H. Sticht and others	
4	Module coordinator	Prof. Dr. H. Sticht	
5	Contents	<p><u>Mechanisms, models and concepts</u></p> <ul style="list-style-type: none"> Principles of protein structure and its role for protein function. Alterations of protein structure and emergence of disease. Elements of protein structure Effect of mutations on protein stability and function <p><u>Specific techniques and methods in structural biochemistry with medical aspects</u></p> <ul style="list-style-type: none"> Computational analysis of biomolecular structures and of disease-associated protein mutations. Methods for structure determination Protein databases and their respective data formats Methods for <i>in silico</i> data analysis Structures of medically important protein classes (e.g. kinases, proteases, nucleic acid binding, or transmembrane proteins) Linear sequence motifs and protein interaction domains Post-translational modifications Protein (mis-)folding and aggregation Protein design Visualization of molecular structures Analysis of interacting molecular surfaces 	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> gain insight into the structural principles of biopolymers and their implications on function acquire profound and hands-on knowledge of important concepts, databases, tools, and methods in structural and computational biology are able to describe and to apply these methods to related problems in the field of structural biology present and critically discuss scientific findings in seminar talks gain experience with a toolset of computational methods and visualization programs that they can apply to their further studies and research projects 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Compulsory module, 1st semester	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 1 - Compulsory Modules

9	Module compatibility	M. Sc. Molecular Medicine
10	Method of examination	Portfolio 1. Written exam, 60 min, multiple choice questions (24402) 2. Presentation with discussion (approx. 30 min) (24401)
11	Grading procedure	Grade of the written exam
12	Module frequency	Annually in the winter term
13	Resit examination	Twice
14	Workload	Class time: 60 h Study time: 90 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	Literature provided on the institute's homepage: http://www.biochem.uni-erlangen.de/studium/index.php „Downloads Biopolymers“ (password needed)

Laboratory Animal Science and Biological Safety

1	Module name	2450 – Laboratory Animal Science and Biological Safety	5 ECTS
2	Courses/lectures	- L: Laboratory Animal Science including Welfare for persons carrying out animal experiments (1 SWS) Mandatory Attendance (20h required) - P: Animal techniques for persons carrying out animal experiments (1.5 SWS) Mandatory Attendance (20h required) - L: Biological Safety (1 SWS)	
3	Lecturers	Prof. Dr. S. von Hörsten, Dr. Schwarz, Dr. R. Jurgons, Dr. Schulze-Krebs, Prof. Dr. A. Boßerhoff and others	
4	Module coordinator	Prof. S. von Hörsten	
5	Contents	<p>Animal Care and Protection</p> <ul style="list-style-type: none"> • Relevant legal provisions (national and international) • Ethical aspects of working with laboratory animals • the 3R principle: “replace, reduce, refine” • Biology and housing of the most important laboratory animal species • Physiological requirements • Diseases of laboratory animals, zoonoses, hygiene in animal housing • Assessment of stress and measures for the avoidance of pain and suffering • Planning and theoretical execution of animal experiments • Behavior of laboratory animals and species-appropriate handling • Administration of substances • Techniques of sample withdrawal • Killing techniques • anesthesiology, analgesia and basic principles of surgery <p>The students obtain a certificate for persons carrying out animal experiments (FELASA Category B) (“Fachkundenachweis nach den FELASA B Richtlinien”). The contents, duration and realization of this course adhere to official regulations and FELASA recommendations. The attendance of the lecture (20h) and practical exercises (20h) are therefore mandatory.</p> <p>Biological Safety</p> <ul style="list-style-type: none"> • Risk potential of working with genetically modified organisms (GMO) • Risk potential of GMOs release • Legal provisions and security measures for laboratories and divisions working with GMOs • Health and safety measures <p>Students can obtain the „Fachkundenachweis Projektleiter für die Biologische Sicherheit nach §15 und §17 GenTSV“.</p>	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • know and understand the legal prerequisites for working with laboratory animals and genetically modified organisms • reflect the ethical aspects of animal testing and genetic engineering • become acquainted and trained in animal handling and standard laboratory animal techniques (mouse, rat, large animal) 	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 1 - Compulsory Modules

7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine
8	Integration in curriculum	Compulsory module, 1st semester
9	Module compatibility	M. Sc. Molecular Medicine
10	Method of examination	Practical exam 120 min (24501)
11	Grading procedure	Pass/fail
12	Module frequency	Annually in the winter term
13	Resit examination	Twice
14	Workload	Class time: 50 h Study time: 110 h

14	Workload	Class time 30h, Study time: 120 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	Principles in Neural Science, Ed. Kandel, Schwartz, Jessel, Mc Graw Hill Basic Neurochemistry 7. Auflage, Ed. Siegel, Albers, Brady, Price, Academic Press

1820 - Seminar Module A2.2: Essential Concepts in Modern Virology

1	Module name	A2.2 – Essential Concepts in Modern Virology (2480)	5 ECTS
2	Courses/lectures	S: Essential Concepts in Modern Virology (2 SWS) Mandatory Attendance	
3	Lecturers	Prof. Dr. K. Überla, Prof. Dr. M. Marschall, Prof. Dr. T. Stamminger and others	
4	Module coordinator	Prof. Dr. Manfred Marschall	
5	Contents	<p>Lecture series with exercises in modern virology. The students present and discuss basic principles of molecular and medical virology using selected current and/or classical publications from scientific journals.</p> <p>The seminar covers the following aspects:</p> <ul style="list-style-type: none"> • antiviral therapy and prophylaxis • vaccination strategies • tumorigenic transformation mediated by viruses • epigenetics of viral genomes • viral regulatory proteins • virus-based vectors • immune control of viral infections 	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • obtain profound subject-specific knowledge in molecular and medical virology. • obtain skills for a critical analysis and interpretation of scientific data. • read, present, analyze and evaluate current/classical primary scientific literature. • learn the design of experimental strategies and techniques suited to answer scientific questions and present their solutions in oral and written form. • train their ability for discussion and teamwork by working in small groups . • give and receive critical feedback to and from fellow student. 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 2nd semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	Presentation 30 min (24801) and term paper 15-20 pages (24802)	
11	Grading procedure	Grade of the term paper	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 2 – Elective Compulsory Modules

12	Module frequency	Annually in the summer term
13	Resit examination	Twice
14	Workload	Class time: 30h Study time: 120h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	Will be determined individually by preparing discussions with the specific tutors.

1820 - Seminar Module A2.3: Molecular and translational concepts of cardiac and renal disease

1	Module name	A2.3 – Molecular and translational concepts of cardiac and renal disease (2485)	5 ECTS
2	Courses/lectures	S: Seminar (2 SWS) Mandatory Attendance	
3	Lecturers	Prof. Dr. K.-U. Eckardt, Prof. Dr. F. Engel, Prof. Dr. C. Korbmacher, Prof. Dr. A. Ludwig, Prof. Dr. T. Volk	
4	Module coordinator	Prof. Dr. T. Volk	
5	Contents	<p>The students present and discuss basic principles of heart and renal diseases using selected key publications from scientific journals.</p> <p>The seminar covers the following aspects:</p> <ul style="list-style-type: none"> • Molecular, pathophysiological and pathological causes, signaling cascades and mechanisms of human cardiac, renal and circulatory diseases including heart failure, cardiac arrhythmia, tubular and glomerular disease, renal failure and hypertension. • up-to-date experimental approaches, techniques and translational concepts in physiology, pharmacology, pathology and experimental medicine. 	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • obtain profound subject-specific knowledge and substantial expertise in understanding molecular mechanisms of disease development and progression. • obtain skills for a critical analysis and interpretation of scientific data. • read, present, analyze and evaluate current primary and review literature. • learn the design of experimental strategies and techniques suited to answer scientific questions and present their solutions in oral and written form. • train their ability for discussion and teamwork by working in small groups . • give and receive critical feedback to and from fellow student. 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 2nd semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	Presentation 30 min (24851) and term paper 15-20 pages (24852)	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 2 – Elective Compulsory Modules

11	Grading procedure	Grade of the term paper
12	Module frequency	Annually in the summer term
13	Resit examination	Twice
14	Workload	Class time: 30h Study time: 120 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	The necessary literature, consisting of original and review articles will be supplied by the lecturers.

1830 - Seminar Module A3.1: Molecular Oncology

1	Module name	A3.1– Molecular Oncology (2490)	5 ECTS
2	Courses/lectures	S: (2 SWS) Mandatory Attendance	
3	Lecturers	Prof. Dr. J. Behrens, Prof. Dr. T. Brabletz, Prof. Dr. M. Stürzl, Prof. Dr. A. Boßerhoff	
4	Module coordinator	Prof. Dr. J. Behrens	
5	Contents	<p>The students present and discuss basic principles of molecular oncology and translational aspects using selected key publications from scientific journals.</p> <p>The seminar covers the following aspects:</p> <ul style="list-style-type: none"> • oncogenes and tumor suppressor genes • oncogenic signaling pathways • molecular therapies • animal models • molecular classification and diagnosis • tumor microenvironment • angiogenesis • tumor immunology 	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • obtain profound subject-specific knowledge and substantial expertise in understanding molecular mechanisms of tumor development and progression. • obtain skills for a critical analysis and interpretation of scientific data. • read, present, analyze and evaluate current primary literature. • learn the design of experimental strategies and techniques suited to answer scientific questions and present their solutions in oral and written form. • train their ability for discussion and teamwork by working in small groups . • give and receive critical feedback to and from fellow student 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 3rd semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	Portfolio: presentation 30 min (24901) and written exam 90 min (24902)	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 2 – Elective Compulsory Modules

11	Grading procedure	Grade of the written exam
12	Module frequency	Annually in the winter term
13	Resit examination	Twice
14	Workload	Class time 30h Study time: 120 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	

1830 - Seminar Module A3.2: Current Concepts of Immunology

1	Module name	A3.2 – Current Concepts of Immunology (2495)	5 ECTS
2	Courses/lectures	S: Immunology (2 SWS) Mandatory Attendance	
3	Lecturers	Prof. Dr. H.-M. Jäck, PD Dr. D. Mielenz, Dr. W. Schuh, Dr. J. Wittmann	
4	Module coordinator	Prof. Dr. H.-M. Jäck	
5	Contents	The students present and discuss important physiologic and pathologic processes in basic and clinical immunology using selected key publications from scientific journals. In an interactive round-table format, each student will develop together with the class the hypothesis, the experimental set-up, the key-experiment(s) and the overall take-home message of the respective publication.	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • obtain profound subject-specific knowledge in molecular, cellular and clinical immunology. • obtain skills for a critical analysis and interpretation of scientific data. • read, present, analyze and evaluate current primary literature. • learn the design of experimental strategies and techniques suited to answer scientific questions and present their solutions in oral and written form. • train their ability for discussion and teamwork by working in small groups . • give and receive critical feedback to and from fellow students. 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 3rd semester	
9	Module compatibility	MSc Molecular Medicine MSc Cell- und Molecular Biology (Department Biology) MSc Life Science Engineering (School of Engineering)	
10	Method of examination	Presentation (24951) and moderation of the round-table discussion (24952)	
11	Grading procedure	Grade of the moderation	
12	Module frequency	Annually in the winter semester	
13	Resit examination	Twice	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 2 – Elective Compulsory Modules

14	Workload	Class time: 30h Study time: 120 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	Janeway's Immunobiology, Garland Science, newest edition Immunology, Kuby, W. H. Freeman, newest edition Roitt's Essential Immunology, Wiley-Blackwell, newest edition

1830 - Seminar Module A3.3: Animal Models in Biomedical Research

1	Module name	A3.3 – Animal Models in Biomedical Research (2499)	5 ECTS
2	Courses/lectures	S: (2 SWS) Mandatory Attendance	
3	Lecturers	Prof. Dr. S. v. Hörsten, Prof. Dr. T. Bäuerle and others	
4	Module coordinator	Prof. Dr. S. v. Hörsten	
5	Contents	<p>The students review present concepts in classification, epidemiology, pathophysiology and treatment of the following major diseases entities: cancer, neurodegenerative disorders, allergies, autoimmune diseases, and metabolic disorders. Subsequently, specific diseases and/or pathomechanisms are brought into focus and their translation into a corresponding animal model is further elaborated using selected key publications from scientific journals.</p> <p>The seminar covers the application of animal models including zebrafish, mice, rats and larger mammals, for the investigation of diseases and therapeutic approaches in areas such as:</p> <ul style="list-style-type: none"> • Neoplasia with focus on metastasis • Neurodegeneration including Alzheimer's, Parkinson's, and Huntington's disease • Allergy including asthma and atopic dermatitis • Autoimmunity with specific reference to multiple sclerosis • Diabetes with focus on Type II diabetes • Special emphasis will be given to systems interactions as well as limitations of animal models including but not limited to their standardization, suitability, and nature-nurture derived aspects in diseases and their models 	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • obtain profound subject-specific knowledge in animal testing and model based biomedical research approaches. • obtain skills for a critical analysis and interpretation of scientific data. • read, present and analyze current primary scientific literature. • independently develop hypothesis and research strategies and present their solutions in oral and written form. • train their ability for discussion and teamwork by working in small groups. • give and receive critical feedback to and from fellow students. 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 3 rd semester	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 2 – Elective Compulsory Modules

9	Module compatibility	M. Sc. Molecular Medicine
10	Method of examination	Presentation 30 min (24991) and term paper 15-20 pages (24992)
11	Grading procedure	Grade of the term paper
12	Module frequency	Annually in the winter term
13	Resit examination	Twice
14	Workload	Class time: 30h Study time: 120 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	Will be determined individually each semester.

1835 - Elective Module

1	Module name	Elective Module	5 ECTS
2	Courses/lectures	Depends on chosen module	
3	Lecturers	Depends on chosen module	
4	Module coordinator	Depends on chosen module	
5	Contents	<p>The students choose from the courses offered at FAU</p> <ul style="list-style-type: none"> • key qualifications • modules from other bachelor's and master's programs, depending on availability • seminars offered by the master's program <p>The key qualifications are faculty-independent course offers that are not related to specific subjects, e. g. languages, communicational and presentational skills. Modules from other bachelor's and master's programs that are not listed as key qualifications can only be chosen with permission from the module coordinator.</p> <p><u>Elective modules in molecular medicine</u> Additional seminars from the elective compulsory part of the master's program in molecular medicine depend on availability. Additional elective modules offered by the master's program are listed in the module manual. Additional research modules or internships need the approval of the study board.</p>	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • can gain insight into diverse academic topics • can acquire soft skills that promote their employability • can broaden their general education • can gain expertise in specific subjects 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective module, 1st semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	Depend on chosen module	
11	Grading procedure	Pass/fail	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg

2425- Project Development

1	Module name	2425 - Project Development	10 ECTS
2	Courses/lectures	P: laboratory course (6 SWS) T: Journal Club (1 SWS)	
3	Lecturers	All lecturers of the master's program	
4	Module coordinator	Prof. Dr. A. Boßerhoff	
5	Contents	Laboratory training and development of a research project in preparation of the master's thesis. The module has a maximum duration of 6 weeks and is composed of: <ul style="list-style-type: none"> • a tutorial, in which the student and the advisor discuss possibilities of a research project based on the current literature • laboratory training for the collection of preliminary data • writing and presentation of a research proposal 	
6	Learning targets and skills	The students <ul style="list-style-type: none"> • gain insight into a research topic of their choice and independently study the current literature • work and integrate themselves in established research groups • apply the rules of good scientific practice to experimentation, documentation and data analysis • utilize modern experimental techniques to collect scientific data and critically interpret their results • evaluate their data, compare them to published results and discuss their findings with the advisor(s) and the research group • develop a research plan for a six months master's project 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 3rd semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	Project plan 5-10 pages (24251) Proposed project and hypothesis (10 lines) Background (1/2-1 page) Preliminary data from the laboratory course (2-4 pages) Time table for the master's project (1/2 page)	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
 Area 2 – Elective Compulsory Modules

		Cost calculation (1 page) References (max. 10) Font: Arial, size: 11 pt, spacing: 1,5x, legends beneath images or tables in 9 pt
11	Grading procedure	Grade of the project plan
12	Module frequency	Each semester
13	Resit examination	Twice
14	Workload	Class time and study time: 300 h
15	Module duration	1 term
16	Teaching and examination language	English
17	Recommended reading	Individually defined by the advisor

Area 3 – Elective Compulsory Modules B

Curricular Categories and Module Names	ECTS	Semester	
Area 3 – Elective Compulsory Modules B	25		Area grade
External Module	25	2.+3.	Graded
Alternative possibility: choice of modules for 25 ECTS from the following			
External Modules for 10, 15 or 20 ECTS	10, 15 or 20		Graded
Research Modules at FAU for 10 ECTS	10		Graded
Elective Module	5		Pass/fail

The area grade is calculated as the average of the modules weighted by the modules' ECTS points. The area 3 grade contributes approx. 21% to the final master's grade (25/120 ECTS).

1850 - B1 - External Module

1	Module name	B1 – External Module (2610)	25 ECTS
2	Courses/lectures	P: 5 months courses or placement at an external research institution or company	
3	Lecturers	Advisors of the Molecular Medicine program	
4	Module coordinator	Head of the audit committee	
5	Contents	<p>The student can</p> <ul style="list-style-type: none"> • follow a course curriculum from a different university or • do a laboratory course at a national or international research institute or • do a company/industry placement <p>All courses and placements must be in agreement with the study board before execution (learning agreement)</p>	
6	Learning objectives and skills	<p>The students</p> <ul style="list-style-type: none"> • can gain insight into international and industrial research environments • can acquire specialized knowledge and practical skills in a research field of their choice • independently organize the curriculum • cope with unfamiliar situations • can improve their language skills • present their work in written form 	
7	Prerequisite	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 2nd and 3rd semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	<p>Depends on chosen content</p> <p>Placement/laboratory course: presentation 30 min pass/fail (26101) and protocol, usually 20-30 pages (graded) (26102)</p> <p>If the student follows a course curriculum at a different university the modules, ECTS and grades will be transferred.</p>	
11	Grading procedure	Grade of the examination(s)

17	Recommended reading	Depends on choice

B3 - Laboratory Research Module

1	Module name	B3 – Laboratory Research Module (2630, 2635)	10 ECTS
2	Courses/lectures	P: 2 months laboratory course at FAU	
3	Lecturers	Advisors of the Molecular Medicine program	
4	Module coordinator	Head of the audit committee	
5	Contents	The students work on a biomedical research project in a FAU laboratory of their choice. They independently study the related literature, plan, execute and document experiments and write a research protocol. The laboratory time can also be split between two research groups (collaborative supervision; one protocol).	
6	Learning targets and skills	The students <ul style="list-style-type: none"> • acquire specialized knowledge in a research field of their choice • integrate into existing research groups • follow the rules of good scientific practice • plan, perform and document research experiments • utilize modern experimental techniques • present their work in written form 	
7	Prerequisites	Enrollment in the M. Sc. program of Molecular Medicine	
8	Integration in curriculum	Elective compulsory module, 2nd and 3rd semester	
9	Module compatibility	M. Sc. Molecular Medicine	
10	Method of examination	Presentation 30 min and protocol of usually 20-30 pages	
11	Grading procedure	Grade of the protocol	
12	Module frequency	Each semester	
13	Resit examination	Twice	
14	Workload	300 h	

Module Manual: Molecular Medicine, Master of Science – FAU Erlangen-Nürnberg
Area 3 – Elective Compulsory Modules

15	Module duration	1 term
16	Teaching and examination language	Depends on choice
17	Recommended reading	Depends on choice

Area 4 – Master’s Thesis

Curricular Categories and Module Names	ECTS	Semester	
Area 4 – Master’s Thesis	30		Area grade
Master’s Thesis	25	4.	Graded
Master’s Colloquium	5	4.	Graded

The area grade is calculated as the average of the modules weighted by the modules’ ECTS points. The area 4 grade contributes 25% to the final master’s grade (30/120 ECTS).

Master's Thesis

1	Module name	Master's Thesis	25 ECTS
2	Courses/lectures	Research project	
3	Lecturers	Thesis advisors of the program	
4	Module coordinator	Head of the audit committee	
5	Contents	<p>Independent investigation of an up-to-date research question from the field of molecular medicine: laboratory work, data analysis and written presentation.</p> <p>Generally, the students work on the research plans that they devised in the module "Project Development". A change of topic or laboratory must be approved by the study board.</p>	
6	Learning targets and skills	<p>The students</p> <ul style="list-style-type: none"> • gain the ability to work on a current scientific problem over a period of 5-6 months • apply the rules of good scientific practice to experimentation, documentation and data analysis • broaden their skills to plan, structure and work on complex problems • acquire subject specific knowledge in the chosen research field • plan and manage their project within the given time frame • develop concepts and approaches to solve a scientific problem • critically analyze and reflect on theories, concepts, terminology, limits and specific features of their chosen topic • choose appropriate scientific methods and apply them to new and interdisciplinary contents • present the data in a scientifically correct form • present, interpret and defend subject specific contents in a clear, audience-oriented form 	
7	Prerequisites	<p>Enrollment in the M. Sc. program of Molecular Medicine</p> <p>The student must have acquired 80 ECTS credit points from the curriculum prior to starting the master's project</p>	
8	Integration in curriculum	<p>4th semester</p> <p>Attention: close timing with the module "Master's colloquium"</p>	
9	Module compatibility	M. Sc. Molekulare Medizin	
10	Method of examination	Written Thesis	

	tion	Written elaboration in form of a scientific manuscript. It describes the scientific findings as well as the way leading to these findings. It contains justifications for decisions regarding chosen methods for the thesis and discarded alternatives. The student's own substantial contribution to the achieved results has to be evident. For more information, refer to No. 18.
11	Grading procedure	Grade of the written thesis (arithmetic means of the two expert reports)
12	Module frequency	Each semester
13	Resit examination	once
14	Workload	The thesis has to be prepared within 6 months
15	Module duration	1 Semester
16	Teaching and examination language	English
17	Recommended reading	Depends on thesis subject
18	Additional information	<ul style="list-style-type: none"> - The master's thesis has to be registered in April for the summer term and in October for the winter term using the official form issued by the study board. - The time limit for the preparation of the master's thesis is 6 months. The thesis advisors are asked to pay attention to ensure an adequate extent of the treated subject. - An extension up to one month is possible under well founded circumstances. - Normally, the thesis will be performed in the same lab as the module "Project Development" on the subject of the student's project proposal. A change of laboratory or subject must be approved by the study board. - It is recommended to invest five months into the experimental work and one month into writing the thesis. <p>The thesis must be written in English. It can only be written in German upon approval of the study board. It must adhere to the following formal requirements:</p> <ul style="list-style-type: none"> - Font: Arial, size: 11 pt, spacing: 1,5x, legends beneath images or tables in 9 pt. - The thesis has the form of a scientific publication, including an index, a list of abbreviations, and the chapters 1. Abstracts in English and German, 2. Introduction, 3. Material and Methods, 4. Results, 5. Discussion, 6. Future Perspectives and 7. References. - The Abstract should not exceed 400 words (1 page). The whole thesis may not exceed 40.000 words and should generally be shorter than 100 pages. <p>The thesis must include a statement, that no other than the stated sources and aids were used.</p> <ul style="list-style-type: none"> - The thesis must be submitted on time to the advisor(s) in two printed versions and an electronic version (PDF). The submission has to be documented on the

		<p>official form issued by the study board.</p> <p>- Both advisors provide independent reports (1-2 pages) within one month after submission. The grading adheres to §18 Prüfungsordnung.</p>
